

## Classrooms without walls. Education without barriers. Learning without limits.

### Communication, education, and collaboration with a global reach.

Although the world does seem to be getting smaller every day, there remains an ever-increasing need for communication, education, and collaboration on a global level. At Elluminate, we believe technology can play a significant part in connecting people across cultures, countries, and even continents, enabling the knowledge and understanding that transcend geographical boundaries.

Introducing Elluminate's Learning Across Borders (LAB), our innovative program for creating a global community of technology-enabled classrooms powered by our Elluminate *Live!* collaboration software. This affordable "classroom in a box" also includes all the equipment you need to get connected worldwide, including a laptop computer, LCD projector, interactive whiteboard, microphone, speakers, and webcam.

Elluminate LAB schools in developing countries can cost-effectively facilitate online student/teacher collaboration and knowledge sharing—nationally and internationally. Extend the boundaries of the physical classroom. Present from the interactive whiteboard. Record content for later review. Engage students with multiple learning styles. Invite remote lecturers to participate. And much more.

### Elluminate LAB solution highlights

- Global community that empowers instructors, students, and administrators
- Portable, cost-effective, technology-enabled classrooms
- Online or blended online/onsite classes
- Improved interaction, collaboration, and knowledge sharing
- Exceptional performance in remote areas, low-bandwidth environments
- Easy to install, easy to maintain, easy to use
- Available in English, Spanish, Portuguese, French, and other languages

An Elluminate LAB was installed at a remote primary school in the Amazon to enable live, online collaboration and dialogue between Brazilian and other international students.
