

Through alliances with the world's leading software, hardware, and service providers, Elluminate delivers an ever-expanding set of tools and integrations to support your education initiatives and business strategies now—and in the future.

Intelligent Integration for the eLearning Landscape

LMS/CMS Integration

"We wanted a synchronous technology that could more closely mirror face-to-face communication, providing that critical oral component for courses like foreign languages. During implementation, both Elluminate and eCollege listened to our needs and made sure that everything worked together. Now our students and teachers can simply log onto the Illinois Virtual High School site and with a single click, go to an Elluminate *Live!* environment."

Matthew Wicks, Illinois Mathematics and Science Academy

Sometimes the whole is greater than the sum of its parts. For many organizations, a successful eLearning solution means a blended approach using both asynchronous and synchronous technology.

That's why we've partnered with some of the best LMS and CMS vendors in the industry to provide you with a fully integrated, live eLearning solution that combines Elluminate *Live!*® with today's most popular distance learning tools.

- Blackboard Learning System—Enterprise
- Blackboard Learning System—CE/Vista Enterprise
- eCollege Course Management System
- Moodle Course Management System
- Sakai Collaboration and Learning Environment
- ANGEL Learning Management Suite
- Others, like Desire2Learn, are on the way

When you integrate Elluminate *Live!* with your existing learning or content management system, it simply appears as one more resource. With just a single click, your instructors and students have easy access to our live eLearning and web collaboration environment directly from their current familiar application.

Custom Integration

"The Elluminate API is flexible and well documented, enabling us to easily integrate the tool. In fact, when we rolled out a new version Elluminate recently, we reengineered our entire custom interface in a single day with the Elluminate *Live!* SDK. It was very straightforward, enabling us to extend capability of system based on the needs of the faculty."

Michael Ciri, University of Alaska Southeast

What about custom interfaces and homegrown content management systems? Elluminate *Live!* SDK is our open architecture initiative that provides a comprehensive set of Application Programming Interfaces (APIs) and specifications that enable you to develop an adapter to connect Elluminate *Live!* with any LMS, CMS, or portal. So you can leverage the technology you have now to meet your unique needs.

Enterprise Directory Services Integration

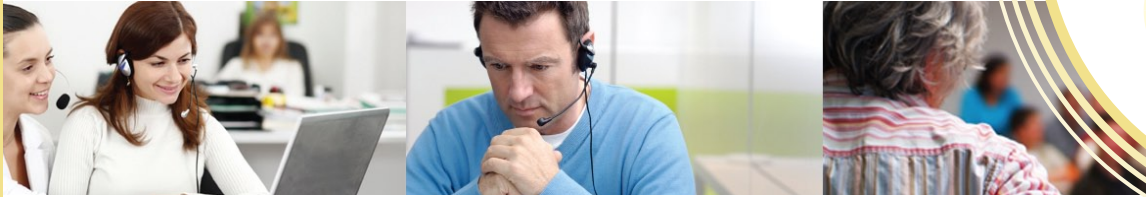

"Elluminate's LDAP/Active Directory integration has been a time saver and a great convenience to our faculty. Plus, it helps better serve staff and administrators that are not using the campus learning management system."

Raymond Pina, California State University, Sacramento

Elluminate's LDAP/Active Directory integration module for server customers allows you to authenticate against your existing organizational directory with usernames and passwords. That means you don't need a unique user database for Elluminate. So you can maintain security and meet the privacy requirements your organization.

The Evolution of the eLearning Landscape.
Powered by Elluminate.

Hardware Integration

"The area of online synchronous communication is rapidly evolving, and there is overwhelming interest and support for using Elluminate *Live!* on a broader campus-wide level. In addition, as a Sun Center of Excellence, we are recognized for our leadership and innovation in the area of eLearning."

Paul Sorenson, University of Alberta

The Elluminate solution fits right in with our partner's learning initiatives, like Apple's 1-to-1 learning program where every student has an iBook and Sun's vision for a Digital Campus.

Elluminate *Live!* is completely cross platform, supporting Microsoft Windows, Sun, Apple, and Linux servers. What's more, whether you have a Microsoft Windows, Solaris, Mac, or Linux system, you get the same superior user experience every time. In addition, our Elluminate *Live!* Virtual Office Portlet is fully integrated into Sun's Java System Portal Server.

Educational Tool Integration

"The collaborative opportunities available in Elluminate *Live!* are tremendous. I use it with my tablet PC to conduct virtual office hour sessions in my chemistry courses. Audio capabilities in Elluminate *Live!* allow me to discuss problem-solving strategies with my students while I use the tablet pen to work problems and draw structures on the whiteboard."

Dr. J. Ricky Cox, Murray State College.

At Elluminate, we're all about engaging more students in more ways. With learning technology partners like Promethean, we continue to push the educational envelope by integrating Elluminate *Live!* with a variety of teaching and learning tools, including interactive whiteboards and tablet PCs.

Services Integration

"Tonight I used Elluminate *Live!* services for the first time, and it was great! I was doing my homework and having some problems arriving at the right answers. Not only did the teacher help me understand what concepts I should use, but he also pointed out some common errors I was making. I would have gotten half my answers wrong and not known why if I hadn't used the virtual classroom. Thanks for all the help."

Student

From interactive tutoring and homework help to live, online content support, Elluminate *Live!* Services help your students achieve academic excellence. Powered by Elluminate *Live!* Academic Edition™, our tutoring services provide access to certified instructors for grades 5 through 12 for help with English, math, and science. For textbook publishers, like CENGAGE Learning (formerly Thomson Learning), eLearning content providers, and curriculum developers, we work with you to design a customized client support program that focuses on the learning process and enhances the learning experience.

What You Can Do ...

- Provide single-click access to virtual classroom from your LMS/CMS
- Add dynamic interaction to asynchronous distance learning
- Keep participants engaged in learning
- Create blended classes with online/onsite participants
- Invite remote guest speakers
- Create, list, and modify scheduled classrooms
- Facilitate creation of online communities
- Leverage existing technology throughout your educational enterprise
- Connect with students, teachers, staff, and parents, regardless of computer platform
- Expand and enhance your educational tool set
- Provide additional services that add value for students and teachers
